

# ***UW Food Services***

## **Portal Widget Description:**

The portal widget represents the on campus Food Services' widget. The widget will provide the user with an overall information about the restaurants on campus.

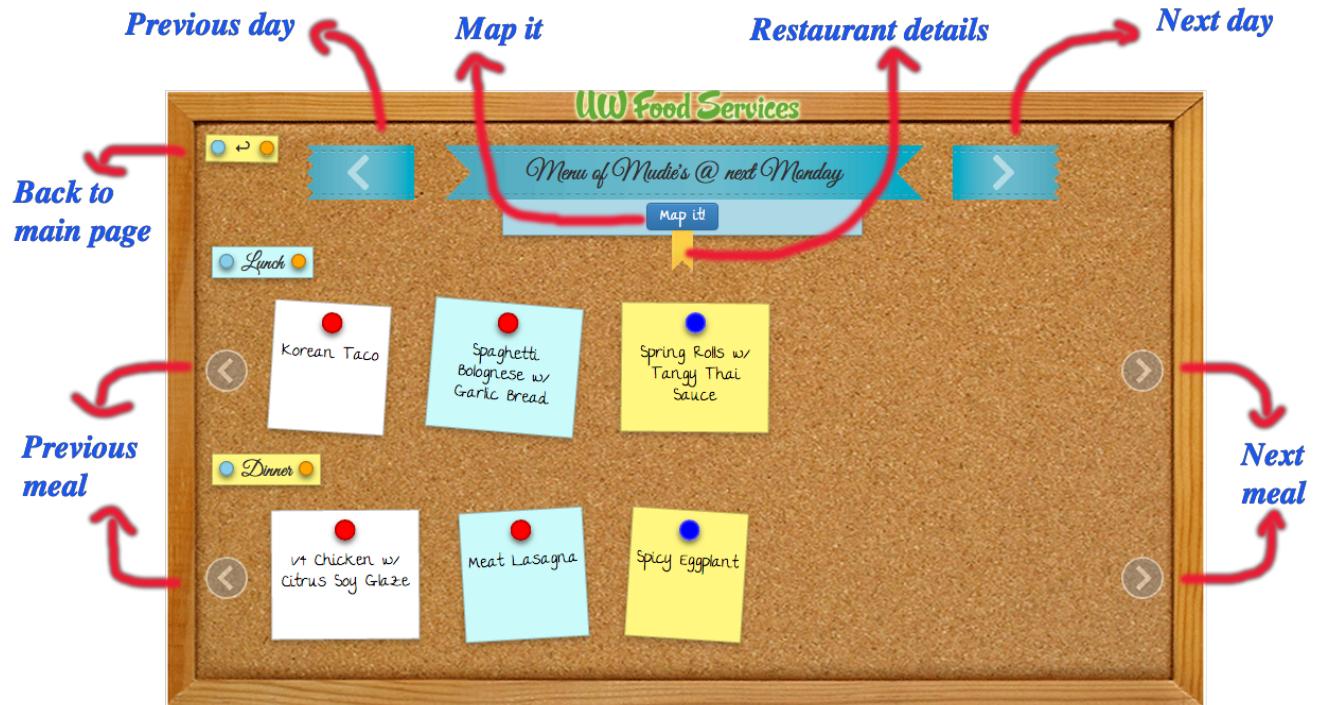

**Preferred browser:** Chrome, even though the widget is cross platform. It works on Firefox and Safari as well, chrome and safari.

## **Interactions between our Widget and users**

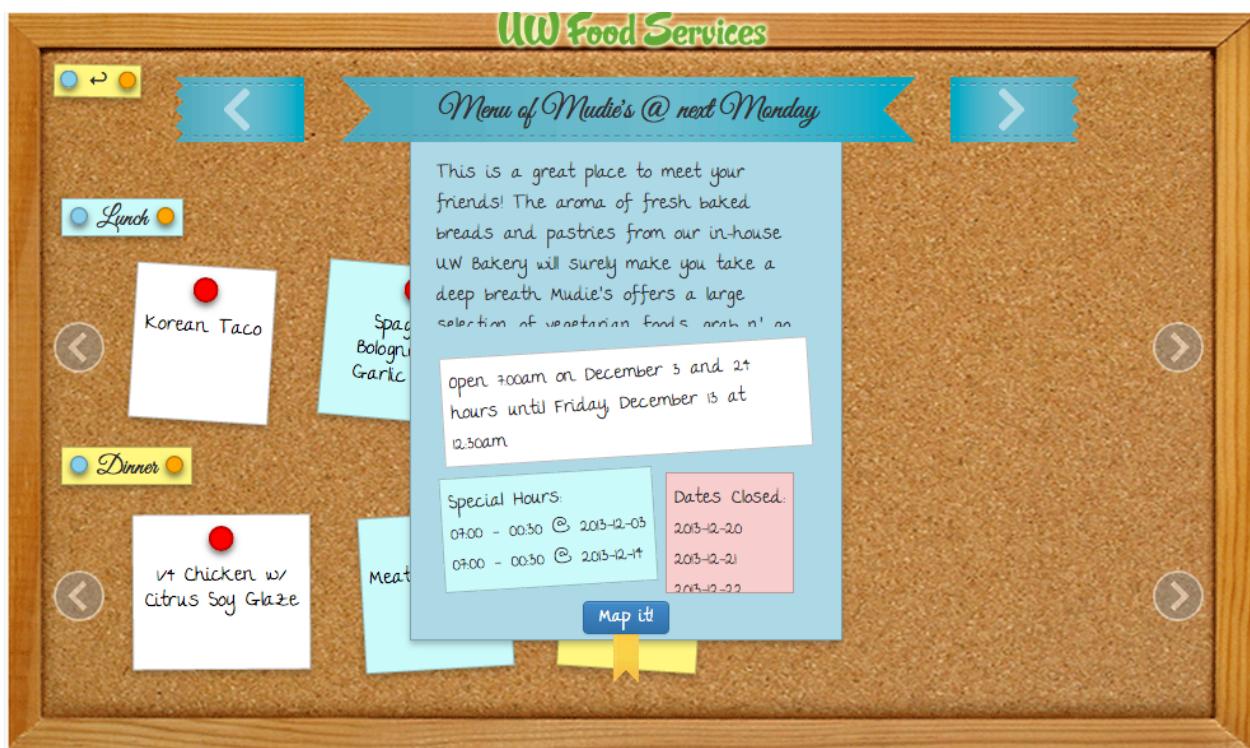

Our widget provides users with a convenient and neat way to explore all restaurants within our campus. All restaurants will be displayed in the main page.

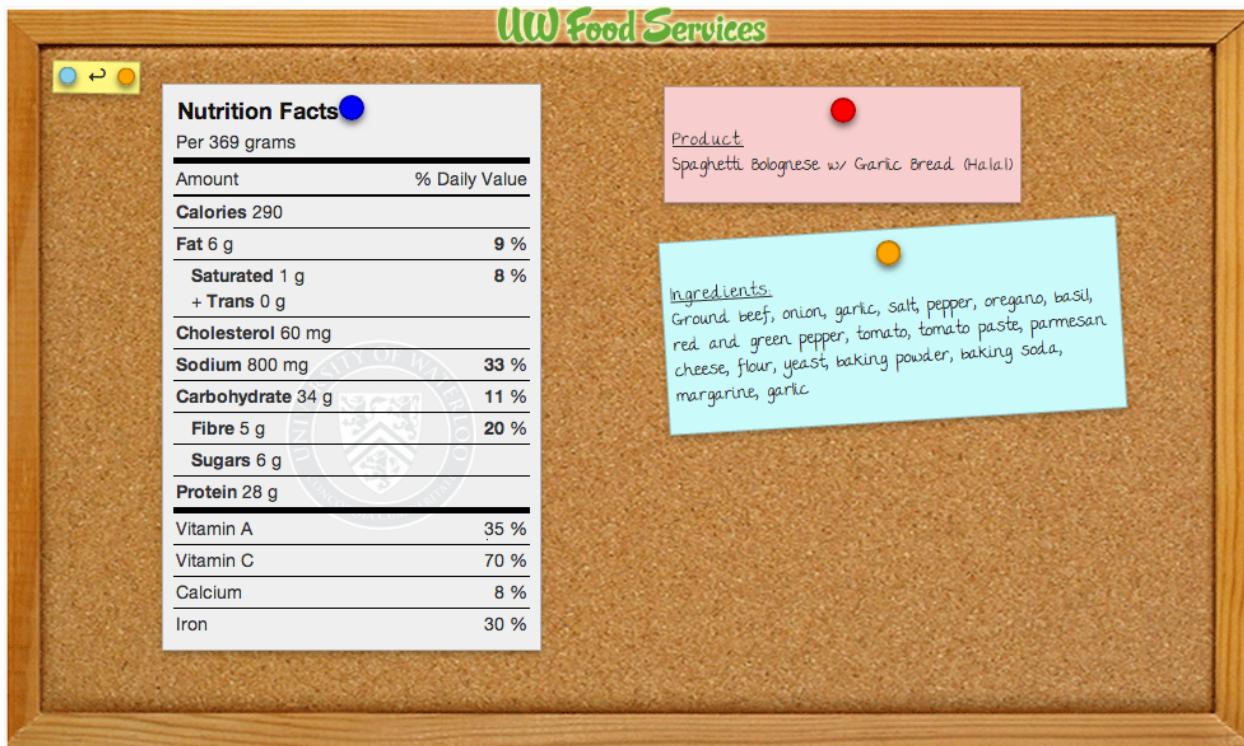

When a restaurant providing menu is pressed, the menu page appears. It will contain lunch and dinner menus.

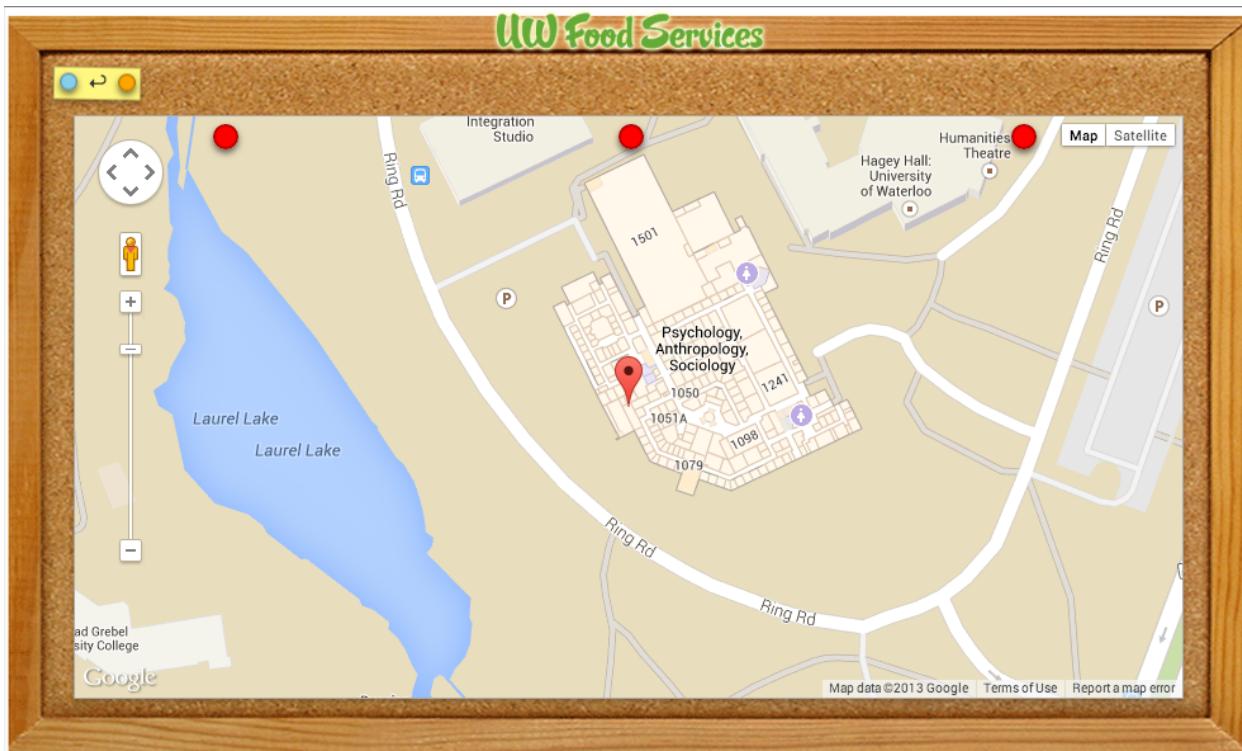

When the yellow ribbon is pulled down, the restaurant description will appear:

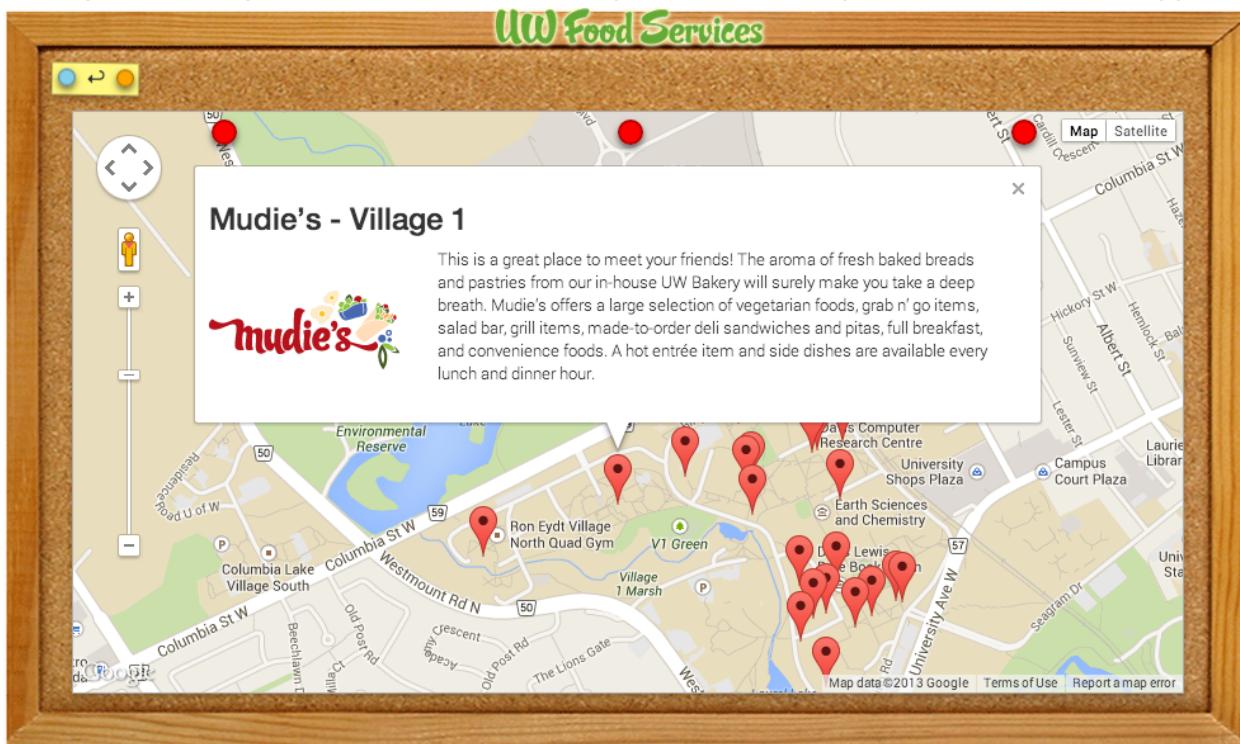

When a menu is pressed, the page providing the menu ingredients will appear if these ones are available online:

When a restaurant not providing menu is pressed, the map page appears, and a location of the restaurant is shown in the map. When the marker in the map is pressed, a description of the restaurant appears.

When map them is pressed, a map view appears displaying all restaurants location in the map. When a specific restaurant marker is pressed, a description of the restaurant appears.

When the school is on vacation, this screen will appear. with a special note.
